

# **HOME OWNERS COLLECTION MANAGEMENT SYSTEM**

This is a PHP entitled Home Owners Collection Management System. This project is a web-based application developed by MR OMAR using PHP and MySQL Database. It provides the Subdivisions/Villages Homeowners Association an automated platform for efficient and effective managing and recording of the collections. The application stores the collection records of the homeowners association members along with some relevant data. It has a simple and pleasant user interface. It is easy to use and has user-friendly features and functionalities.

About the Home Owners Collection Management System

I developed this project using the following:

XAMPP v3.3.0 as my local webserver that has a PHP Version 8.0.7

PHP Language

MySQL Database

HTML

CSS

JavaScript

jQuery

Ajax

Bootstrap

AdminLTE

The Home Owners Collection Management System requires the management to log in their system user credentials in order to access the features and functionalities of this system. The system users are composed of 2 types of roles which are the Administrators and Staff users. The Administrators have the privilege to access all the features and functionalities of the system while the Staff Users have only limited access. The management is required to populate the Collection Categories and Phase List first in using the system for the first time. The system also generates printable monthly collection reports.
